Power Platform Functional Consultant

ABOUT

Extremely driven IT professional who is passionate about Cloud Technologies and Information Technology. Skilled in Microsoft 365/SharePoint/Power Platform Development, with a background in on prem and Cloud technologies, IT support, and Web Development.

I love working directly with other people to help them reach their goals (whether it be technical or non-technical). I enjoy collaborating with users to help solve their business needs and make their processes more efficient.

I'm a team player who's passionate about his work.

A technology enthusiast.

Lover of all things fitness.

Video game nerd.

A wannabe financial guru.

WORK EXPERIENCE

Senior Engineer Application Developer

Protective | 2022 - Present

Senior Developer on an agile team delivering apps using the Power Platform.

- Design and develop integrated business solutions that interact between multiple enterprise platforms within Power Platform and cloud (Azure).
- Integrate with the Power Platform using other Microsoft products such as SharePoint, Teams, and Azure.
- Collaborate with business and IT leadership to develop and communicate long term vision and comprehensive strategic plans for solution architecture and delivery.
- Work with product owners, business users, and technical leads to define requirements, assess business value, and develop specifications for enterprise solutions.
- Use Agile best practice to design, develop, and maintain solutions built in enterprise applications platforms.

Programmer/Developer Lead

Capgemini | 2021 - 2022

Power Platform Solution Architect

Azure Fundamentals

Power Platform Developer/Lead working as a Consultant leading a team of Developers and Support staff.

- Design and implement a project's technical architecture.
- Integrate with the Power Platform using other Microsoft products such as SharePoint, Teams, and Azure.
- Provide end-to-end architecture of a solution, including its assembly and integration into the IT architecture principles defined with the client.
- Define the structure of the system, its interfaces, and the principles that guide its organization, software design and implementation.
- Manage and mitigate any technical risks, ensuring that the Delivery services can be realistically delivered by the underlying technology components

Developer – Microsoft 365/SharePoint/Power Platform

Connection | 2019 - 2021

Junior M365 Developer working as Consultant helping companies migrate to the cloud.

- Help guide business units on using the appropriate solution for existing and new applications.
- Provide project-based design, configuration, development and deployment of SharePoint online and other Office 365 apps (Teams, OneDrive, Power Platform, etc.) including custom sites, lists, document libraries, manage content, customizations, web parts, and forms.
- Participate in business requirements gathering using an Agile approach by working with business and IT to deliver solutions. Work with the business and technical teams to refine and enhance existing processes, implement changes to the production environment and ensure IT processes and controls are followed.
- Convert existing Lotus Notes applications to Microsoft Power Platform and SharePoint platform.
